DESCRIPTORS Allied Health Occupations Education; Annual Reports; Church Related Colleges; *College Attendance; College Faculty; College Freshmen; *College Students; *Enrollment Trends; Females; Full Time Students; *Higher Education; Law Schools; Males; Medical Schools; Multicampus Colleges; National Surveys; Private Colleges; State Colleges; State Universities; Tables (Data); Technical Institutes; Trend Analysis

ABSTRACT

This 60th annual report on collegiate enrollments in the United States is based on data received from 1,635 four-year institutions in the U.S., Puerto Rico, and the U.S. Territories. General notes, survey methodology notes, and a summary of findings are presented. Detailed statistical charts present institutional data on men and women students and staff in these categories: unitary state college and university systems: public universities and institutions of complex organization: private universities and institutions of complex organization: multipurpose colleges and universities: independent colleges of arts and sciences (liberal arts): music, fine arts, and applied arts schools: independent law, medicine, and allied health schools: independent technological, business administration, and related schools: Bible schools and colleges: and theological schools for lay workers. Summary data are presented on: full-time entering freshman enrollments in 1200 comparable institutions: largest institutions: geographical divisions: and percentage enrollment changes for 1950-1979. COLLEGIATE ENROLLMENTS IN THE U.S., 1979-80
Statistics, Interpretations, and Trends in 4-Year and Related Institutions

J. Ernest Mickler

The 60th annual report on collegiate enrollments in the United States was based on data received from 1,635 four year institutions in the U.S., Puerto Rico, and U.S. Territories. The grand total of student enrollments for fall 1979 was 6,929,323. Of these there were 4,904,085 full-time and 2,016,731 part-time students (8,507 undesignated students). Women students comprised 49.5% of the population with men comprising 50.5%.

The studies were begun in 1919 and continued for 40 years by the late Dr. Raymond Walters, long-time president of the University of Cincinnati. In 1960 Dr. Garland G. Parker of Cincinnati assumed the authorship and continued the studies for 19 years through fall, 1978. Formerly the studies were published in *School and Society* and its successor *Intellect*. However, since 1975, The American College Testing Program has published the studies as ACT Special Reports. A companion report on enrollments in American two-year institutions was begun in 1972-73, and ACT has published this series since its inception.

The 60th annual study of 4-year institutions and the 8th annual study of 2-year institutions were conducted in a different setting by a new researcher. Because of the feeling that there was merit in continuing the studies The University of Alabama became the institutional sponsor of the research in 1979. J. Ernest Mickler, Assistant Vice President for Planning and Operations, assumed the responsibility for conducting the research, and ACT agreed to continue its publication.

As a non-governmental activity, requirements cannot be imposed on the submission of data. However, 83% of eligible institutions reported enrollments in time for inclusion in the report (actually reports from 32 additional institutions with total enrollments in excess of 80,000 students were received too late to incorporate in the 4-year study). The studies have

been based through the years on comparable data. For enrollment data to be included in the calculation of percentages of change, an institution must have provided data for the current and immediate preceding years. This procedure assures that spurious changes are not reported but instead that the changes are reliable and represent actual differences from one year to the next. Great care has been exercised to avoid error in calculations and presentation of data; however, the author cannot be responsible for information submitted incorrectly. The American College Testing Program assumes no responsibility for the data, interpretations, and conclusions in the study. Unless noted, enrollments in the tables are actual counts, but the percentages represent changes based on comparable data institution by institution.

Grand total enrollments register an increase of .5%. Total enrollments in the nation's 4-year colleges and universities continue to fluctuate. In fall, 1976 the first decline occurred in total enrollments in 25 years, in fall, 1977 there was growth of slightly less than 2%, and in fall, 1978 a slight decrease of .3% was reported. In 1979 growth occurred again by .5%. The increase was calculated on the basis of reports from 1,457 institutions which reported enrollments in fall, 1978 and again in fall, 1979. Total enrollments and percentage changes by category as defined on page 17 were as follows: 141 unitary systems, 1,781,120, +2.9%; 138 public complex universities, 1,928,825, −1.4%; 72 private complex universities, 686,338, −2.1%; 270 multipurpose colleges and universities, 1,347,664, +.2%; 661 arts and sciences, 861,285, +1.8%; 39 music, fine arts, and applied arts, 24,670, +2.7%; 60 independent, law, medicine, and allied health schools, 40,829, +.6%; 88 technological, business, and related schools, 204,061, +1.8%; 55 Bible colleges 22,602, +.1%; and 111 theological schools, 31,929, +2.3%.

Despite an overall gain, there were declines in total enrollments in the private and public complex universities of 2.1% and 1.4% respectively. In two categories which represent approximately 38% of the enrollments in the 1,635 reporting institutions, this loss amounts to approximately 37,000 students. However, most of the decline was accounted for in the part-time student category. Gains in enrollment ranged from 2.9% to .1% with the highest increase reported by the unitary state college and university and the least increase by the Bible colleges. Between the extremes were music, fine arts, and applied arts schools with +2.7%; theological schools with 2.3%;

colleges of arts and sciences and independent technological, business administration and related schools with +1.8% each; independent law, medicine, and allied health schools with +.6%; and multipurpose colleges and universities, with +.2%.

Full-time enrollments show an even greater gain — up 1.7%. Full-time student enrollments accounted for 71% of the reporting population in the 1979 data. This figure does not reflect much change over the past year or so; however, there were some fairly significant shifts in part-time enrollments. Only two categories of institutions had declines in full-time enrollments in fall, 1979: Multipurpose colleges and universities with less than -.1% and theological schools with −2.3%. Each of these categories experienced total enrollment gains as reported above. The full-time enrollment percentages of increase ranged from 3.1% reported by the unitary systems to 1.2% reported by the private-complex universities. Details of enrollments by category are in the following sections. Listings by institutions within categories are presented in Tables 1-10.

Unitary systems report a 3.1% increase in full-time enrollments. The unitary state systems account for 26% of the total number of students enrolled in the 1,635 institutions which reported this year. By definition these systems include all higher education campuses which are controlled by statewide boards and administered by an executive officer with statewide system responsibilities.

There were 1,201,981 full-time students reported by the 141 campuses of the unitary state systems, a gain of 3.1% over the 1978 totals from comparable institutions. Total enrollment on the unitary systems campuses for fall, 1979 was 1,781,120, a gain of 2.9% over figures reported by the same units last year.

A notable decline was observed in full-time faculty with a decrease of 6.2%. Yet, there was an overall increase in total faculty of 4.9%. A logical explanation for this change is that part-time faculty members can be employed with less cost to the institution than full-time, tenure earning faculty.

Actual enrollments in the unitary systems are reported in Table 1.

Public-complex universities show a gain in full-time enrollments of 1.7%. The full-time student count of 1,418,745 in the 138 large public-complex universities reporting this year represented a gain of over 22,000 enrollees. However, the total enrollment at these institutions shows an overall decline because of a rather significant decline (9.0%) in part-time students. Declines were registered by both men and women part-time students. In an era when many writers suggest that part-time enrollments will become the mode for the decades of the 80s and 90s, this development is difficult to explain, unless, of course, their conjecture is unfounded. Perhaps the decline is a manifestation of the suggestion that Parker (1979) made last year concerning the adjustments which large institutions will have to make in the future.

Despite the 1.4% decline in the total student population, there was a 2.4% increase in faculty at the public-complex universities. The enrollment counts by institutions are presented in Table 2.

Private-complex universities full-time enrollments increase by 1.2%. The gain in full-time enrollments came as a result of a 3.4% increase in women students. There were rather sharp declines in part-time enrollments which led to a 2.1% decline in the total student population. There were 471,746 full-time students enrolled on the 72 campuses of the reporting private-complex institutions.

The increase in full-time enrollments continues a trend reported by Parker (1979) in previous years. This is the fourth consecutive year in which there have been increases for the private-complex institutions. Though the increases have been small, continued growth of these prestigious institutions probably reflects a growing concern among students today for quality in education. Table 3 presents the enrollments of private-complex institutions.

Multipurpose institutions full-time enrollments decline by less than .1%. Gains were noted in both part-time and full-time women students in the 270 multipurpose institutions reporting. Increases of over 1% were registered in full-time women students and 2.6% in part-time women students. However, the decline in part-time men of 1.7% and full-time men of 1.2% resulted in a slight loss for the multipurpose institutions.

By definition, the multipurpose institutions are those which offer graduate work but limit doctoral program offerings to two fields. These are typically the state colleges and state teachers colleges, many of which developed into regional state universities during the 1960s. This year, these institutions enrolled almost one-fifth of the population reported in the four-year study. The problem of energy shortages may result in unexpected gains for the multipurpose institutions in the future. As regional institutions, their capability to attract students may be enhanced by the general attractiveness of low tuition and proximity to the students' homes.

The total full-time enrollments of 905,433 at the multipurpose institutions represent a less than .1% loss among comparable institutions reporting last year. Tabulations of enrollments by institutions are found in Table 4.

Arts and sciences colleges report continued growth—full-time enrollment up 2.0%. Though hard times have been predicted for the private liberal arts colleges, they experienced fairly significant gains in the fall of 1979. The 661 institutions reported 861,285 students enrolled of which 77% were full-time for a full-time enrollment of 663,850. Women student enrollments registered sizeable gains in both full-time and part-time categories. However, part-time men declined significantly and full-time men showed a small gain of about 1%. Full-time staff appointments increased by 3.7% in the liberal arts colleges along with the increase in total enrollments of 2%. The students per full-time instructor ratio in the arts and sciences colleges was approximately 21 to one.

Historically, the liberal arts colleges have sought students in a fairly competitive market and they have developed recruiting techniques which have produced good results. Recent modifications in the Basic Educational Opportunity Grant program may have given additional support to these institutions and account for a fairly substantial increase. Table 5 gives the institutional listing and tabulations.

Music, fine arts, and applied arts schools full-time enrollments are up 2.7%. The trend of continued growth in these specialized institutions was extended in fall, 1979, though the percentage increase was not as large as the past two years. The 39 reporting schools had a full-time enrollment of 20,256 students which represented a 2.7% increase over last year. An increase of

slightly more than 100 part-time men students resulted in a percentage growth of approximately 8%, the highest in the study for the year but considered relatively non-significant because of the small base in comparison with almost all of the others which are in multiple thousands. Tabulations for the music, fine arts, and applied arts schools are reported in Table 6.

Independent law, medicine, and allied health institutional full-time enrollments were up 2.5% over last year. The 60 reporting institutions had a total enrollment of 40,829 students, with 86% or 34,647 in the full-time category, and represented an overall gain of .6%. A sizeable increase occurred in full-time women students and actually were the source of the enrollment growth. Parker (1979) suggested a "leveling off process" in last year's report and substantiated the notion by citing the annual successive increases in the category of 8.3%, 12%, 11.1%, 4.2%, and .7% beginning in 1974. As stated before, women students accounted for virtually all the growth this year and may represent deliberate action on the part of these institutions to give women greater opportunities in programs which, in the past, traditionally enrolled men.

Enrollments by institution are listed in Table 7. Other medical enrollments, those of public and private universities which are a part of diversified programs, are treated later in the study.

Independent technological, business, and related schools overcome last year's slowdown—up 2.2%. Traditionally, the enrollments at the independent technological, business, and related schools have been largely men. Though this continues to be the pattern there was substantial growth (8.0%) in the numbers of part-time and full-time women students in fall, 1979. Full-time enrollment in the 88 reporting institutions was 148,149 which represented an overall growth of 2.2%. The enrollment pattern in this category of institutions has varied considerably from year to year. It is unlikely that the variation can be attributed to any single factor, but economic conditions may affect these institutions more than others. Certainly the pool of potential students has not varied as has the enrollment pattern. Enrollments by institution are presented in Table 8.

Bible colleges register an increase in full-time enrollments—up by .4%. The decline in full-time students which began in 1977 did not continue through

1979 at the Bible colleges. Also, there was a very slight increase (.1%) in total enrollments due to gain in part-time men students. Full-time enrollment at the 55 institutions which reported this year was 19,105. The ratio of full-time to part-time students at the Bible colleges is around 85% to 15% each year, and the ratio of men to women students is about 56% to 44%. Perhaps it would be well to emphasize again that percentages of change are calculated from matched pairs of figures. Any college or university must have had enrollment data for fall 1978 and 1979 to be included in the derivation of the percentages of change. However, actual enrollments for the current year are presented in the tables. Enrollment data on the Bible colleges are presented in Table 9.

Theological schools experience a decline in full-time enrollments—down 2.3%. A rather dramatic shift occurred in the data reported by the theological schools this year. There was a 6.7% increase in part-time enrollments and a 5.6% increase in the number of women students. Increases were noted in both categories last year (Parker, 1979); however, the gains in 1979-80 were far greater. Obviously there had to be a decline in full-time men students. Whether the men became part-time students or whether they dropped out must remain as speculation. However, a 7.2% increase in part-time men students was reported. The fairly sizeable influx of women into the theological schools could be explained logically by the growing acceptance of women as ministers in the Protestant churches. Institutional listings for the theological schools are in Table 10. The 111 theological schools reported a full-time enrollment of 20,173 students and registered a loss in full-time enrollments of –2.3%.

Part-time students decline by 2.8%. The enrollment of part-time students appears to be less stable than expected. Institutions which viewed the part-time student as the solution to the projected enrollment declines may have to rethink their positions. Probably, the fact that decline occurred instead of growth is more significant than the percentages or even the decline in numbers (approximately 54,000). The anticipated vast pool of potential part-time students did not materialize in 1979 according to the reporting institutions. The development of corporate educational programs may have impacted part-time enrollments in collegiate institutions. The significant decline in part-time men would suggest this conclusion. In 1979, the 1,635 reporting institutions enrolled 2,016,731 part-time students and registered

the 2.8% loss noted above. The total part-time enrollments and percentage changes within categories are as follows: 141 unitary state systems 573,046, +1.6%; 138 public-complex universities 510,080, –9.0%; 72 private-complex universities 214,592, –8.4%; 270 multipurpose institutions 442,231, +.6%; 661 independent arts and sciences colleges 197,435, +1.1%; 39 music, fine arts, and applied arts schools 4,414, +5.5%; 60 independent law, medicine, and allied health schools 4,769, –16.5%; 88 independent technological, business, and related institutions, 55,912, +1.4%; 55 Bible colleges 3,497, –1.5%; and 111 theological schools 10,755, +6.7%.

Full-time entering freshman enrollments up by 2.9%. The author has been very careful to follow the precedents set by Dr. Parker over the past years. A change was made this year, however, in the reporting of freshmen students. Previously, classified freshmen—all students enrolled with freshman standing had been reported; this year first-time freshmen will be reported. Examination of the input documents, review of previously completed studies in this series, and those done by NCES revealed some confusion over the term "classified freshmen." On the premise that no confusion would exist with the term first-time freshmen, the decision was made to change the report to this degree.

The 1,200 four year colleges and universities reporting comparably in fall, 1979 enrolled 931,053 full-time entering freshmen for a 2.9% gain over last year. An actual gain of 26,627 students was recorded. Within the ten categories, the number of institutions, the numbers of entering freshmen students, and the percentages of change were as follows: 114 unitary systems, 238,371, +6.8%; 111 public-complex universities 237,317, -.6%; 58 private complex universities 71,172, +1.9%; 214 multipurpose colleges and universities 188,218, +4.4%; 579 independent colleges of arts and sciences 164,017, +2.1%; 31 music, fine arts and applied arts schools, 2,574, +3.1%; 46 independent technological, business administration, and related schools 24,482, +1.1%; and 47 Bible schools 4,902, +.6%. The total number of institutions which reported freshman enrollments for the study was 1,359 for a total first time freshman enrollment of 1,059,999.

Enrollments of women students continue to grow—up by 2.0%. The trend of increasing numbers of women students on college and university campuses continued in fall, 1979 and moved within less than a percentage point of

being equal to enrollments of men. Over the past five years, the percentages have been as follows: 1975-76, 45.4%; 1976-77, 46.3%; 1977-78, 47.5%; 1978-79, 48.7%; and 1979-80, 49.3%. In the 1,635 reporting institutions this year the grand total of women students was 3,414,576 which represented a percentage growth of 2.0% in comparable institutions. Men student enrollments totaled 3,506,240 for an overall decline of 1.1%.

There were 2,330,172 women students enrolled full-time for a 3.3% gain. Also, there was a .3% growth in full-time men students with a total of 2,573,913 enrolled in all 4-year collegiate institutions which reported for fall, 1979. Comparisons of these full-time enrollments show that the ratio of full-time women to full-time men for the year was 47.5% to 52.5% respectively. Last year, women made up 46.8% of the full-time total, 45.9% in 1977-78, and 44.7% in 1976-77. Again, the enrollment of women students continues a pattern of steady growth. Full-time enrollments by sex are delineated in Tables 1-10. Percentages of change in full-time enrollments of men and women students respectively by categories were as follows: Unitary, +1.4% and +4.9%; public-complex, +.3% and +3.3%; private-complex, -.5% and +3.4%; multipurpose, −1.2% and +1.2%; arts and sciences, +.9% and +2.9%; music fine arts and applied arts, +1.3% and +2.8%; law, medicine, and allied health, +.4% and +7.5%; technological, business, and related, +.4% and +7.5%; Bible, +.3% and +.4% and theological −3.9% and +5.8%.

There were 1,084,404 part-time women students who enrolled in the 1,635 reporting institutions for a decrease of −.8% based on comparable data. The enrollment of part-time men continued to decline but at a much more rapid rate than last year. In 1978, the percentage of decline was 1.5% while the decline for 1979 was −4.9%. The actual number of part-time men students was 932,327. Women continued to outnumber men in part-time enrollments growing from 50.2% in 76-77, to 51.3% in 77-78, to 53% in 78-79, to 53.8% in 1979-80.

In the 1200 institutions reporting full-time entering freshmen comparably there were 455,562 men for a gain of 2.0% and 475,491 women for a gain of 3.9%. The ratio of men to women in the freshman classification was 49% men and 51% women. (For the first time in the series of studies there have been more freshman women then men.) The percentages of gain or loss by

categories for entering freshman men and women respectively were: Unitary, +5.3% and +8.2%; public-complex, −.9% and −.4%; private-complex, +.1% and +4.3%; multipurpose, +2.0% and +6.6%; arts and sciences, +2.8% and +1.5%; music, fine arts, and applied arts, +7.3% and −.4%; technological, business, and related, +2.5% and −2.6%; and Bible, +1.6% and −.4%.

Enrollments by geographic regions show considerable change. In 1979, both the full-time and part-time students were included in the geographic analysis as Parker had done for the past two years. Previously only full-time students were represented in the breakdowns by region. However, the anticipated impact of part-time enrollees seemed to justify the change.

Table 13 lists the 1979-80 fall enrollments of the 1,457 comparably reporting institutions by regions and states. The grand total of these comparably reported enrollments was 6,549,527 for a .5% increase. These same institutions reported 6,518,800 students enrolled in the fall of 1978. Total enrollments by regions with percentage changes were as follows: New England, 355,854, −3.9%; Middle Atlantic, 1,264,771, +.9%; East North Central, 1,254,872, −.2%; West North Central, 561,071, −2.0%; South Atlantic, 942,302, +2.4%; East South Central, 460,957, +3.2%; West South Central, 586,215, +1.2%; Mountain, 407,804, −2.1%; Pacific, 654,197, +2.1%; and Commonwealth and Territories, 61,484, −1.0%. Again the South Central regions showed enrollment gains. This year they were joined in substantial growth by the South Atlantic region and by the Pacific region. Generally the "sun belt" states grew while the others declined. Whether this is a trend remains to be seen. Table 13 provides the detailed listing of the geographical data.

Enrollment of veterans and other related student groups continue to decline—down 17.1%. As expected with the factor of elapsed time, fewer veterans and others receiving veterans benefits were enrolled in colleges and universities in the fall of 1979. Major decreases have occurred over the past few years with 33.3% fewer students in 1976-77, 19.1% less in 1977-78, 18.5% in 1978-79 and the trend continued with 17.1% less in 1979-80. In comparison with the previous year, almost 136,000 fewer persons were receiving educational benefits through the educational programs of the Veterans Administration.

Detailed information which follows was provided by Donald R. Foxvog, Director for Magazines and Special Projects, on behalf of the Veterans Administration. Under Chapter 31, U.S. Code (former Public Law 894, Korean Vocational Rehabilitation, and Public Law 87-815, Peacetime Vocational Rehabilitation), 12,406 veterans were in college as of November 30, 1979. Chapter 34 benefits, which provide college level readjustment training under Public Laws 89-358 and 90-77, covered 488,457 veterans and 19,386 service personnel—a total of 507,843 in training—or a decrease of 17.1% since the end of November 1978. The downward trend in veteran enrollments over the last four years has been caused largely by the loss of GI Bill eligibility by large numbers of post-Korean veterans who were discharged before June 1, 1966, the effective date of that bill. Orphans, spouses, and widow(er)s of service personnel or veterans receiving educational benefits for college-level training under Chapter 35 number 57,184, a decrease of 9.2%. The total college level enrollment of all veterans and service personnel was 520,249, a decrease of 16.8%. The count of all veterans, service personnel, spouses, widow(er)s, and sons and daughters at the college level was 577,433, a decrease of 16.1%. Veterans enrolled in on-the-farm, on-the-job, and flight training programs, and in other noncollegiate degree programs, totaled 138,060. The grand total of veterans only for all laws and levels was 638,923. This figure represents a decrease of 16.9% from the 1978 total of 769,173.

It is not correct to assume that all of the students formerly covered by GI bill benefits failed to enroll only because of the expiration of their coverage during the past four school years. Some students completed their academic training, and others chose to terminate or interrupt their training prior to having arrived at their 10-year delimiting date. The Veterans Administration reported, however, that the educational community should be aware of the decline in student assistance provided by the VA because of the phasing out of the current GI bill education program. On November 23, 1977, a new Public Law 95-202 was enacted. It raised educational benefits for veterans by 6.6% and provided other benefits for the veterans and their enrolling institutions. The 65% participation rate of veterans noted in 1978 under the present GI bill is far higher than the 43% rate under the Korean conflict GI bill and the 50% rate under the World War II GI bill. Although veteran enrollments will continue to decline, the improved benefits provided by PL 95-202 has slowed the decline somewhat.

Full-time equivalent (FTE) moves up—1.2% gain. The full-time equivalent student calculation for these studies has been made by adding one-third of the headcount of part-time students to the headcount of full-time students. The method gives a fair approximation of the measure of instructional effort which is tied in most instances to the funding process. In the 1,635 institutions reporting for 1979-80, the FTE grand total was 5,277,020. By categories, the FTE comparable totals and percentage changes were: Unitary 1,392,581, +2.9%; public-complex, 1,534,472, +.4%; private-complex, 526,584, −.3%; multipurpose, 945,952, +.1%; arts and sciences, 674,431, +1.9%; music, fine arts, and applied arts, 18,835, +2.3%; law, medicine, and allied health, 27,742, +1.8%; technological, business, and related, 118,857, +2.1%; Bible, 18,840, +.3%; and theological, 18,726, −1.2%.

In most categories, the full-time student increases accounted for the FTE increase. When taken alone the part-time enrollments converted to FTE's resulted in a 2.8% decline for the year in all institutions reporting. The part-time student decline may be a phenomenon of the fall of 1979, but in any event, the anticipated enrollment declines of the coming years will likely not be solved through part-time enrollments. Furthermore, as Parker (1979) stated, "In general it takes three or four part-time students to offset the credit hour loss of one full-time student." Consequently, recruitment of part-time students requires considerable investment for limited dividends.

Graduate school enrollments increase—by 2.7%. Upon initiation of the tabulation of graduate school enrollments Parker clearly distinguished between graduate enrollments and first-professional enrollments. Recognizing the importance of the first-professional degree category, Parker developed separate sections of the report in law, medicine, and theology. Graduate enrollments, then, represent students pursuing advanced study in a variety of academic disciplines in programs designed to provide indepth educational experiences. In the past, those who enrolled in these programs would become the instructors, researchers, and administrators in colleges and universities. However, advanced technologies and the explosion of knowledge have changed the once limited concept of graduate education. Virtually all corporate structures of any size have research and development sections or divisions which call upon graduate schools to supply their needs for personnel.

There were 889 graduate schools which reported a grand total enrollment of 1,076,068 students in fall, 1979. In the 721 institutions reporting comparable data this represented a growth of 2.7%. The ups and downs cited by Parker (1979) continued this year. In 1976-77 there was a loss of 5.4%; in 1977-78 there was a rise of 3.6%; in 1978-79 a decline of 3.1% and for 1979-80 the increase cited above. In the year under study, there were 551,818 men enrollees and 524,250 women with percentages of change of -.7% and +6.6% respectively. In 1979 women accounted for 48.7% of the population—a continuation of gains over the past four years with 47.2% in 1978-79; 46.6% in 1977-78; and 45% in 1976-77. Full-time men students continued to decline in 1979 by 6.3%; however, full-time women increased by 1.3%. Of the full-time population women made up 41.5% of those enrolled. Also, women continued to outpace men in part-time enrollments with a gain of 9.2%. As well, part-time men student enrollments grew by 3.6%. There were 318,230 men and 358,874 women enrolled part-time. Women continued to widen their gains in representation in the part-time population. This year women accounted for 53%, whereas in 1978-79 they made up 51.9% of enrollees, 50.9% in 1977-78, and 49.2% in 1976-77. The sizeable drop in full-time graduate students (-3.3%) and the even greater increase of part-time enrollees (+6.8%) may reflect the economic conditions of fall, 1979. It could be perceived that students continued to see the need for graduate education, but the availability of funds for assistantships prevented many from enrolling full-time. Perhaps, too, others felt that they must hold a position secure while pursuing graduate study part-time. In any event, this year's data bear out the notion of change in graduate enrollments. They also suggest, however, that graduate schools can anticipate further growth in the coming years. Certainly there are fields with surpluses and there are persons with doctorates who are unemployed, but in a process in which the end product occurs over an extended time frame, there will be surpluses and shortages.

Medical school enrollments increase 3.4%. There were 1,687 more medical students enrolled in the 102 comparably reporting colleges and universities in the fall of 1979. Most programs remained at about the same level as the previous year; however, some institutions reported rather substantial increases. For the most part, these increases accounted for the 3.4% growth. Women student enrollments continued to grow with the 1979-80 increase amounting to 8%. The prior year, the percentage increase of women was

4.7% and in 1977-78 it was 10.9%. The 147 reporting schools indicated an enrollment of 18,040 women students and 58,491 men. Percentages of change were calculated from comparable data which included almost 40,000 men and slightly over 12,000 women for a comparable population of 51,943 students.

The increase in 1979-80 was similar to those of the past several years with the exception of 1978. In that year, there was only a .9% increase. The three previous years, however, recorded gains of 3.6% for 1977-78; 4.7% for 1976-77; and 5% for 1975-76. As indicated previously, women students account for much of the recent enrollment gains. This year, 23.5% of the population was female. In 1978-79, it was 22.6%. Again the movement of women into traditionally male professions is clearly indicated.

The growth of medical education in the future, as is the case with all collegiate education, depends upon a number of factors. It is reasonable to expect that the demands for practicing physicians will continue at a high level and that medical research will expand. Other factors which are much more difficult to predict are the sources of additional financial support for expanding medical education, state and federal legislation providing medical services and care, economic conditions, and other imponderables such as war, changes in the medical services delivery system, and technology among others.

Size ranking of the largest institutions and systems. Some changes occurred in the ranking of the 35 largest institutions in the fall, 1979 data. As stated previously the author reported the information received and did not verify data input documents. Moreover, at least one institution in last year's top 35 did not report in 1979. Consequently there were changes in the composition of the group and in the rankings. Also, reports were not received from several branch campuses of the large unitary systems.

As Parker (1979) stated, "there is no automatic academic virtue in size, whether great or small." Neither is there fault in either. Table 13 provides ranking based on total enrollments and on full-time enrollments.

An overview of enrollments in 1979-80. The combination of the enrollments in 4-year and related institutions with those tabulated in the companion

study of 2-year institutions resulted in a grand total enrollment for fall, 1979 of 10,251,087. There were 1635 4-year institutions and 965 2-year institutions for a total of 2,600 institutions reporting. It should be pointed out that there are duplicated counts of enrollments in those 2-year institutions which are a part of the administrative structure of a 4-year institution. This has been the reporting practice in the series for several years and should not present a problem in this report.

As stated previously, the final results of the 60th Annual Collegiate Enrollment Study showed an increase in enrollment of .5% among comparably reporting institutions, and was based on a grand total of 6,929,323 students. The grand total enrollment in the 2-year schools was 3,321,764 with an increase of 1.3%. The percentage increase derived from both studies for fall, 1979 was +.7%. In November 1979, based on reports from 1,169 institutions, an early estimate on changes in enrollments for the fall term was calculated. At that time both 2 and 4-year institutions reported 3,362,548 students enrolled as compared with 3,291,416 in the fall of 1978. At approximately the same time the National Center for Educational Statistics (NCES 1979) reported an estimated increase in enrollments of 2.4%. In April 1980, NCES (1980) reported final figures which showed a 2.8% increase in enrollments nationwide. Fairly substantial differences exist between the early estimates and the final results in the ACT studies and in comparison with the NCES final tabulations.

It is reasonable to assume that colleges with substantial growth reported earlier than those with little or no growth and consequently biased the early estimate. Another reasonable assumption would be that the final report is in error. However, that is not the case; the data were rechecked to the source documents and the final results were the same.

There is a major difference in the data base of the ACT studies and the NCES studies and in the institutional participation. The NCES studies are nearly universal and calculate changes based on that universe. However the ACT studies are based on matched pairs of data reported by voluntarily participating institutions. Whether these differences account for the discrepancy reported remains a matter of speculation.

In the 4-year study there was overall growth in enrollments and growth in all categories of institutions with the exception of large public and private

universities. In both instances the declines were due largely to sharp decreases in part-time students. The enrollment of women students continued to grow more than that of men and for the first time in the series there were more freshman women enrolled than freshman men.

Looking to the Future. Obviously significant changes in enrollments in higher education will occur in the next decade or so. The number of high school graduates will decline and as a consequence fewer potential college enrollees will be available.

It is doubtful that demands for increased collegiate training will result in an influx of non-traditional students in such magnitude that colleges and universities will continue to grow or even hold their own. It is likely that some institutions will close and others will experience retrenchment and decline. But, higher education has met and dealt with immense problems in the past; it is anticipated that such will be the case again.

DEFINITIONS USED IN THIS ACT SPECIAL REPORT

Student and Teaching Staff Definitions

The full-time student devotes substantially all working or study time to the college curriculum. This is interpreted generally to mean 12 collegiate credit hours presumably 75% of a normal load or more, but may be less for graduate students. The **part-time student** normally takes collegiate credit courses in the late afternoons, on weekends, in the evening, frequently in the day, or by extension, and enrolls for fewer than 12 credits, or less than 75% of a normal load.

First-time freshmen (full-time) are presumed to be only those entering freshman full-time students who have not previously attended any college, inclusive of students enrolled in the fall term who attended college for the first time in the summer of 1978 as well as students who entered with college credits earned before graduation from high school.

Classified freshmen (full-time) are presumed to be full-time freshman students. This includes the first-time freshmen, as defined above, as well as any students who transferred from another institution at the first-year or freshman undergraduate level and any other first-year freshman undergraduate students.

Unless otherwise designated, it is presumed that **all collegiate credit-hour students at all levels** (undergraduate, graduate, and professional) are counted in the appropriate categories.

Two-year college students are those enrolled in collegiate-level credit-hour courses in 2-year (certificate or associate degree level) colleges administered by the institutions completing the reports.

Full-time equivalent enrollment. Full-time equivalent enrollments are not cited by institution, but totals are computed by categories of schools. This provides information broadly indicative of significant trends and developments in higher education above and beyond those revealed by headcount tabulations. The **adjusted headcount method**, whereby full-time equivalent enrollment is interpreted to equal the headcount of full-time students plus one-third the headcount of part-time students, is used.

The **full-time teaching staff** is composed only of those persons who hold the rank of instructor or its equivalent, and those of higher rank, in full-time employment, who give at least half their time to instruction. The **total teaching staff** includes both **full-time** and **part-time** teaching staff not on leave, including lecturers, fellows, teaching assistants, research assistants (if they teach), and others who teach. Cooperating teachers in public or private schools who supervise student teachers for colleges and universities are not covered in this study.

Institutions surveyed in this report are universities, 4-year colleges, upper-division colleges, other baccalaureate degree-granting schools; graduate, professional, and theological schools; and junior or 2-year colleges administered by the above-defined schools that have regional association, professional organization, and/or state agency recognition, approval, or accreditation.

Institutional Classification Definitions

Unitary state college and university systems—multi-campus college or university systems administered centrally by a statewide board of directors or trustees and a statewide president or chancellor.

Public universities of complex organization—public institutions of complex organization that offer baccalaureate degrees in many disciplines and graduate programs through the doctoral level in three or more fields.

Private universities of complex organization—private institutions of complex organization that offer baccalaureate degrees in many disciplines and graduate programs through the doctoral level in three or more fields.

Multipurpose colleges and universities—public and private colleges and universities that have multipurpose educational functions but do not offer graduate work through the doctoral level in more than two fields.

Independent colleges of arts and sciences (liberal arts)—independent public and private colleges whose primary function is to offer baccalaureate programs in the arts and sciences.

Music, fine arts, and applied arts schools—public or private schools that offer baccalaureate and/or graduate training in music, fine arts, or applied arts as their primary educational function.

Independent law, medicine, and allied health schools—public or private institutions whose primary function is to offer specialized training at the baccalaureate and/or professional or graduate levels.

Independent technological, business administration, and related schools—public or private institutions whose primary function is to offer specialized training at the baccalaureate and/or graduate levels.

Bible schools and colleges—private institutions whose primary function is to offer baccalaureate programs in biblical studies.

Theological schools and schools for lay workers—public or private schools whose primary purpose is to give theological training in postbaccalaureate professional or graduate programs to religious professionals and lay workers.

Elsewhere in this report, these classifications may be abbreviated as follows: unitary systems; public-complex; private-complex; multipurpose; arts and sciences; music, fine arts, and applied arts; law, medicine, and allied health; technological and business; Bible; and theological schools. As circumstances change, shifts from one category to another may be necessary. Institutional representatives are invited to consult with the author when reclassification appears to be in order.

In the tables, "S.C." or "S.U.," i.e., "State College" or "State University," is an institutional name which indicates public status. Where the designation is not made clear by the name, a "pub" entry follows the name of the school. Other listed units are private schools. The "M" or "W" designation indicates either a men's or women's college; all others are coeducational. "Coord" institutions are ones that have separate colleges for men and women.

TABLE 14

Survey of Percentage Changes in Enrollments, 1950-1979
(For 4-Year and Related Institutions)

Year	Full-time	Part-time	Grand Total	Freshmen
1979	1.7%	-2.8%	.5%	2.9%
1978	-.9	1.0	-.3	-.2
1977	1.3	2.3	1.6	1.0
1976	.2	-3.2	-.8	3.7
1975	2.9	7.7	4.3	7.4
1974	2.0	8.0	3.7	4.6
1973	2.1	5.9	1.8	-1.7
1972	-.4	2.1	.2	-3.1
1971	3.2	.9	2.6	-.7
1970	4.9	2.2	4.2	3.8
1969	4.8	4.0	4.6	4.5
1968	6.2	6.2	6.2	4.9
1967	6.2	4.3	5.7	2.3
1966	8.0	.3	5.8	-.9
1965	12.7	3.3	10.0	17.3
1964	10.1	7.3	9.3	17.3
1963	6.2	6.0	6.3	3.8
1962	6.2	7.3	6.5	.3
1961	7.5	4.2	6.6	5.4
1960	6.2	3.9	5.5	11.4
1959	4.0	2.9	3.6	4.5
1958	4.1	8.6	5.4	7.1
1957	2.7	8.0	4.2	.3
1956	6.5	11.5	7.8	3.3
1955	9.0	6.5	8.3	9.4
1954	6.8	9.7	7.6	9.2
1953	2.2	-1.1	1.3	6.0
1952	-1.5	-2.8	-1.8	10.2
1951	-11.4	4.6	-7.8	-6.4
1950	-9.4	-3.2	-7.1	-8.5

Note: Percentages extracted from annual collegiate enrollment studies published in *School & Society* (1960-70), *Intellect* (1971-73), and *ACT Special Reports* (1974-78). Based on studies by J. Ernest Mickler in 1979, Garland G. Parker, 1960-78, and the late Raymond Walters, 1950-59.
